

Nectar is the most important reward offered by plants to pollinating animals. This book is a modern and interdisciplinary text on nectar and nectaries, prompted by the expansion of knowledge, especially in the more ecological and now molecular fields, and the strong recent interest in pollination biology. The topics covered vary widely: they include historical aspects, the structure and ultrastructure of nectaries and relationships to plant systematics, the dynamics of nectar secretion, nectar chemistry and the molecular biology of defence proteins, adaptations to insect and vertebrate nectar consumers and consequences for pollination ecology, and broad-scale studies of nectar resources at the community level.

About nectar and nectaries. NECTAR. Many flowering plants attract potential pollinators by offering a reward of floral nectar. The primary solutes found in most . Even though nearly 90% of angiosperms produce nectar, many aspects of the biology of nectaries and nectars have been historically understudied, particularly .

Background and Aims Floral nectaries and nectar features were compared between six Argentinian Ipomoea species with differences in their pollinator guilds: I. The structure of nectaries was studied based on histological sections from flowers and flower buds. Nectar was extracted using glass.

Here the set of events that lead nectar to the external environment is presented and discussed mainly for stomata-free nectaries. After being synthesized, the.

In , flowering abundance, seasonal dynamics of flower opening, longevity of a flower, nectar production as well as the localization and structure of . The data relating to the nectaries and nectar secretion in invasive Brassicacean taxa are scarce. In the present paper, the nectar production. Nectar is a sweet, pleasant-tasting liquid secreted by nectaries. These are specialized organs located inside flowers, and also outside. For example, the glands .

Nectar secretion and nectaries in basal angiosperms, magnoliids and non-core eudicots and a comparison with core eudicots. Erbar, Claudia. Extrafloral nectaries on Prunus africana. Extrafloral nectaries (EFN) are nectar- producing plant glands located physically.
